

SNAEHATH P

 Snaehath |  Snaehath |  snaehath972002@gmail.com |  Portfolio

TECHNICAL SKILLS

FULLSTACK

- JavaScript, TypeScript, Python, Rust
- React, Next.js, React Native
- Node.js, Express.JS
- REST APIs, WebSockets, OAuth

DATABASE

- MongoDB
- Redis
- SQL

TOOLS

- Docker, Git, Postman
- Tauri, Win32 API
- Figma

EDUCATION

ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

Bachelor of Technology (B.Tech) from
Sri Venkateswara College of Engineering (SVCE)

CERTIFICATIONS

- React: The Complete Guide (Udemy)
- Scientific Computing w/ Python (fCC)
- Web Dev Bootcamp (Udemy)

HACKATHONS

MAMMATHON

Built **Pirate Land**, a real-time Web3 arcade game featuring one-click Para onboarding and on-chain move verification via Celestia.

EXPERIENCE

GOODBARDS | SOFTWARE DEVELOPER

React, Next.js, Typescript, Tailwind, Shadcn

Full-time
Sep 2025 – May 2026

- Architected the core **CDP infrastructure**, delivering high-complexity management modules for unified **Contacts and Companies** data handling.
- Engineered an extensible **Custom Field System**, allowing users to define dynamic meta-data and expand entity schemas during contact creation.
- Developed the **Import Pipeline (Job History)**, enabling large-scale **CSV bulk uploads**, automated entity provisioning, and progress tracking.
- Built **Segmentation Engine** using multi-condition query logic for real-time cohort tracking and targeted automated campaign distribution.
- Developed **Email Marketing Engine** with Design → Content orchestration and the **Brand Kit Workstation** for corporate identity management.
- Developed **AI Translation Studio** with chain-of-thought auditing and a centralized **Prompt Studio** for versioned agent orchestration.
- Integrated **OCR-based Business Card ingestion** for entity extraction and designed the unified **Social Media Hub** for multi-platform scheduling.

CMRL (CHENNAI METRO) | DEEP LEARNING ENGINEER

Python, YOLOv8, OCR, Flask, OpenCV

Internship
Mar – May 2024

- Built vehicle classification system with HSV color detection and OCR; integrated via Flask API on metro POS machines for under 2s processing.

PROJECTS

READHUB ECOSYSTEM (WEB & MOBILE)

[Web] | [Mobile]

- Developed cross-platform content suite featuring **Gemini summarization** and a RAG-based **AI storyteller** maintaining narrative consistency.
- Engineered high-performance **React Native** mobile app with FlatList optimizations and Zustand persistent state for seamless cross-platform sync.
- Integrated **RBAC with JWT security** and generative trend simulation to produce future-scenario headlines from geopolitical data.
- Integrated **Zustand global state** with manual hydration checks for zero-flicker personalized sessions and unified user profile experience.
- Optimized rendering cycles via **component memoization** and modular API services, achieving a 3× faster content consumption rate.

AQUAFLOW - HYDRATION TRACKER

[GitHub]

- Architected high-performance, offline-first mobile app with **React Native (Expo SDK 54)**, **NativeWind**, and **TypeScript**.
- Engineered adaptive goal scaling algorithm using **OpenWeather API** to dynamically calculate hydration targets based on temperature and activity.
- Implemented ultra-fast persistence (<1ms latency) leveraging **Zustand** paired with synchronous **MMKV C++** storage.
- Designed custom vector **SVG fluid physics animations** using **Reanimated** and optimized waking-hours notification scheduling.

SPOTLIGHT-WIN V0.4

[GitHub]

- Developed high-performance Windows launcher in **Rust** following an accelerated learning path (Shell implementation → Production tool).
- Achieved **sub-1ms query latency** via the **Tantivy** search engine and engineered **fuzzy search logic** to outperform native OS prefix search.
- Optimized application boot by **10x** using an asynchronous icon caching subsystem; architected modular **11-crate backend** with **Win32 API** and **Tauri 2.0**.
